DETAILED ACTION

Applicant's cancellation of claims 1-34 and 44-76 in Paper No. 3 is acknowledged.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 35,38,39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohno et al. (5,727,989) in view of Laurent (5,915,860).

With respect to claim 35, Ohno et al. disclose a polishing pad cartridge in an apparatus having a supply and take-up spindles spaced apart by first distance, the polishing pad cartridge comprising: a supply roll (33) and take-up roll (34) rotatably coupled to a frame (see figs 3,7); and an elongated polishing pad (2) having a first end attached to the supply roll and a second end attached to the take-up roll (see fig. 3).

Ohno et al. fail to disclose a cartridge frame having a first attachment portion and second attachment portion spaced apart from the first attachment portion by a second distance wherein the second distance being approximately equal to the first distance between the supply spindle and the take-up spindle.

Laur nt discloses a cartridge frame having a first attachment portion and second attachment portion spaced apart from the first attachment portion by a second distance

0702

Art Unit: 3723

wherein the second distance being approximately equal to the first distance between the supply spindle and the take-up spindle (see figs. 8,9).

It would have been obvious to one having ordinary skill in the art the time the invention was made to provide apparatus of Ohno et al. with a cartridge frame having a first attachment portion and second attachment portion spaced apart from the first attachment portion by a second distance wherein the second distance being approximately equal to the first distance between the supply spindle and the take-up spindle in view of Laurent so as to keep the two rollers in position and ensure the polishing tape is under tension.

With respect to claim 38, Ohno et al. fail to disclose the polishing tape includes polyurethane.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide apparatus of Ohno et al. with polishing tape that includes polyurethane, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416. See also *Ballas Liquidating Co. v. Allied industries of Kansas, Inc.* (DC Kans) 205 USPQ 331.

With respect to claim 39, Ohno et al. fail to disclose wherein the supply roll includes an axle having a portion extending beyond an edge of the polishing pad and the first attachment portion of the frame includes an opening sized to rotatably receive the portion of the axle.

Art Unit: 3723

Laurent discloses wherein the supply roll includes an axle having a portion extending beyond an edge of the polishing pad and the first attachment portion of the frame includes an opening sized to rotatably receive the portion of the axle (see fig. 8). It would have been obvious to one having ordinary skill in the art the time the invention was made to provide apparatus of Ohno et al. with supply roll that includes an axle having a portion extending beyond an edge of the polishing pad and the first attachment portion of the frame includes an opening sized to rotatably receive the portion of the axle in view of Laurent so as to keep the two rollers in position and ensure the polishing tape is under tension.

Claims 36,37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohno et al. (5,727,989) in view of Laurent (5,915,860) as applied to claim 35 above, and further in view of Tietz (6,135,859).

With respect to claim 36, Ohno et al. fail to disclose the polishing pad is a fixed abrasive polishing pad that includes a suspension medium and plurality of abrasive elements fixedly distributed in the suspension medium.

Tietz discloses a fixed abrasive polishing pad (110) that includes a suspension medium and plurality of abrasive elements fixedly distributed in the suspension medium (see col. 6, lines 1-8 & fig. 4).

It would have been obvious to one having ordinary skill in the art the time the invention was made to provide apparatus of Ohno et al. with a fixed abrasive polishing pad that includes a suspension medium and plurality of abrasive elements fixedly distributed in

Art Unit: 3723

the suspension medium in view of Tietz so as to polish more substrates without replacing the pad.

With respect to claim 37, Ohno et al. disclose wherein the spindles have projections extending away therefrom and the supply roll (33) and take-up roll (34) having aperture for receiving the spindles (see fig. 7).

Claims 40 and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohno et al. (5,727,989) in view of Kondo (5,865,545).

With respect to claim 40, Ohno et al. disclose a polishing pad cartridge in an apparatus having a supply and take-up spindles spaced apart by first distance, the polishing pad cartridge comprising: a supply roll (33) and take-up roll (34) having aperture for receiving the spindles (see fig7); and an elongated polishing pad (2) having a first end attached to the supply roll and a second end attached to the take-up roll (see fig. 3), the elongated polishing pad (2) being at least partially coiled on the supply roll (see fig. 3).

Ohno et al. fail to disclose the take-up roll is being movable relative to the supply roll to separate the first and second apertures by a second distance approximately equal to the first distance while the polishing pad is attached to the supply roll and take-up roll.

Kondo discloses a cartridge device having a supply roll that is being movable relative to the take-up roll (see figs. 3-5) but fail to show a take-up roll that being movable relative to the supply roll.

It would have been obvious to one having ordinary skill in the art the time the invention was made to provide apparatus of Ohno et al. with a cartridge device having a supply

Art Unit: 3723

roll that is being movable relative to the take-up roll in view of Kondo so as to replace worn out polishing tape with a new one.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide apparatus of Ohno et al. a cartridge device having a take-up roll that is being movable relative to the supply roll, since it has been held that rearranging parts of an invention involves only routine skill in the art. *In re Japikse*, 86 USPQ 70.

With respect to claim 43, please refer to claim 38 above.

Claims 41,42 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohno et al. (5,727,989) in view of Kondo (5,865,545) as applied to claim 40 above, and further in view of Tietz (6,135,859).

With respect to claim 41, please refer to claim 36 above.

With respect to claim 42, please refer to claim 37 above.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Shiraishi, Shimoyama et al., Loidi, Nelson et al., Ishida, Li et al., and Coote disclose cartridge device respectively.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anthony Ojini whose telephone number is 703 305 3768. The examiner can normally be reached on 7.30 to 5.00 Tuesday-Friday with every other Monday off.
